

## The integration:

Wavestore's integration with Honeywell Galaxy Dimension allows Security Industry Association (SIA) Level 4 compliant events to be received by Wavestore's Video Management Software (VMS) in order to deliver a truly unified security solution that combines powerful video, data and audio management with leading Intruder Detection capability.

### Server side

Wavestore VMS servers and the Intelico ANPR system are connected to each other via the network with H.264 video streams from ANPR capture cameras initially streamed to, and recorded by, the Wavestore server and then restreamed to the Intelico system. This negates the need to send two streams from the camera. Data is then pushed from the Intelico system into the Wavestore server when an event occurs – such as when a car number plate is read.

This data is sent to, stored in, and accessed from the Wavestore metadata engine, which is an option you must include when specifying your Wavestore VMS edition. The data pushed to the Wavestore metadata database by the Intelico system can be associated with any number of cameras, adding powerful visual verification and bringing enhanced operator decision-making to an integrated security solution.

The Wavestore VMS can be installed on Wavestore's own range of servers, or on a host of compatible third-party brands, providing video, data and recording management across the end-customer's site. The Intelico system provides full number plate enrolment, administration, control and management across the end-customer site.

### Client side

Wavestore's WaveView client software application can be installed on multiple client machines to access the Wavestore server(s). WaveView provides complete live monitoring and playback control of cameras and other devices, as well as enabling data from the Intelico system to be monitored and controlled from the same screen.

In addition, it is possible to overlay both individual number plate details and number plate list/group details upon capture to any number of associated cameras. This allows an operator to view live video, search for events or manage triggers linked from access control events either in real time as they happen or via post-event interrogation. Operators are then able to easily stitch together video from time synchronised events using Wavestore's 3-click evidential export function. Users are also able to search for specific number plates or number plate groups via WaveView, to quickly bring up event lists and associated video, incorporating IF, AND, OR functionality to search for number plates that have entered a specific entrance, for example.

## Key features:

- Within the Intelico system, users are also able to define custom groups of number plates, such as VIP or black lists, that can be pushed to the Wavestore server and a total of five groups can have actions associated to them in real time, such as automatically moving a camera, open a barrier or alert security staff. Post event, Wavestore is able to display video from any number of list name searches
- Benefit from adding overview cameras to ANPR cameras, providing better situational awareness
- Automate a host of functions, such as open barrier, alert security staff, move cameras etc. for up to 5 number plate lists/groups
- Adds powerful post-event search functionality to ANPR applications
- Open VMS platform that unlocks the full potential of your integrated security solution. Easily add technology such as Access Control, Video Analytics and other devices to your system with ease of user control and administration

## What to order

To enable Intelico ANPR integration with Wavestore's VMS, please order the following for each Wavestore NVR/HVR:

INT-WS-INTELICO-01 - Integration module for full one-way communication between Wavestore and Intelico. Order one per Wavestore NVR/HVR.

The Intelico integration module is compatible with Premium, Enterprise and Ultimate level channel licenses.

If you require any additional assistance, please contact Wavestore via: [info@wavestore.com](mailto:info@wavestore.com)

## About Wavestore

Wavestore, the British developer of innovative open platform Video Management Software (VMS), supports you every step of the way to help you effortlessly unlock the full potential of your client's security solutions and maximise their return on investment, while providing you with a reliable and independent open platform VMS partner who can make even the most complex integrations simple.

Completely independent and open-platform, Wavestore's VMS delivers powerful video recording, storage and event management coupled with seamless integration to third party devices and sub-systems - including cameras, access control, advanced video analytics, intruder detection, EPoS and video walls, to name but a few, from the world's leading vendors.

Wavestore's 'One screen, total control' philosophy makes it possible to manage everything from the smallest standalone site to the largest and most complex multi-site and multi-technology security solutions efficiently and easily from a single client computer or mobile device, bringing together video, audio and metadata to fully meet the requirements of your specific application.

## About Intelico

Accuplate's advanced recognition engine provides industry leading accuracy and speed for vehicle access control.

Integration is seamless with most major camera and hardware manufacturers and provides total controllability via the simple to use operator interface.

The system is designed to handle the challenges that face an ANPR system such as weather, damaged plates or foreign characters, poor lighting in covered environments, tailgating and speed or angle of approach.
