

wavestore
integrity in digital recording

Professional Video Recording Solutions

Wavestore is a global provider of professional digital video and audio recording solutions for security and surveillance applications. With more than 10 years of experience, Wavestore specialises in reliable, flexible and high performance video recording management systems which support a wide range of analogue, IP, megapixel, 360 degree, HD, HDcctv, thermal and intelligent cameras.

Wavestore high quality video solutions are designed to dynamically integrate with third party applications to deliver a complete and high security environment which can be customized to respond to specific requirements, providing years of reliable operation.

At Wavestore, we understand the importance of providing robust, reliable systems that deliver functionality without complexity.

Wavestore Solutions

Wavestore products operate on a Linux platform and include digital, network and hybrid video systems. Wavestore digital video recorders can be expanded to a hybrid capability by simply and quickly upgrading the system license, enabling to add to your existing analogue cameras system the powerful IP and megapixel cameras, without the need to discharge your old analogue cameras and cabling.

The innovative Wavestore solutions start from standalone systems to large industrial network installations able to handle hundreds of various cameras simultaneously.

Wavestore concurrently supports a wide variety of camera technologies, allowing customers to implement the best combination of cameras to meet their surveillance requirements. Our products simultaneously record multiple compression formats, achieving superb quality video resolution at minimum bandwidth. The extensive scalability of the open platform design further enhances Wavestore products' capabilities.

Wavestore technology is also available to OEMs and systems integrators as a software only solution, enabling them to create custom solutions to fulfill unique commercial and technical specifications.

A Complete Video Solution System

Wavestore has established technology partnerships with many of the leading developers of video analytics solutions to ensure that those involved in security and surveillance operations can utilise Wavestore's robust and resilient video surveillance solutions and benefit from the latest advances in video analytics technology.

The Wavestore integration with video analytics can help identify unusual or suspicious activity, enabling security personnel to react quickly and effectively to any incident, as well as effectively analyse what could be may thousands of hours of video evidence.

With Wavestore you can easily upgrade your security system to accommodate all your evolving needs in terms of camera types, video analytics and third party applications, such as access control, video wall, alarms, command and control. The modifications required to extend or upgrade your security system to embrace new technologies are straightforward.

With the Wavestore SDK third parties can easily develop their own applications which integrate with Wavestore video and audio recording systems, even for cross-platform applications running on Windows and Linux.

By adopting Wavestore you can take advantage of the low cost of ownership, maximize return on your investment, and gain a long term durable solution that can grow and expand with your requirements for many years ahead.

Ease of Use

Wavestore is extremely easy to install and operate. With the user friendly client interface, you can simply and quickly position and size the display of live or recorded video from multiple cameras on a single screen. The display can therefore be customised to match the specific operational requirements and optimise the user experience.

Wavestore empowers security personnel to detect and proactively respond as soon as the monitored event occurs. With Wavestore you can rapidly and easily locate, review, collate and copy crucial video evidence to various media

devices for ease of presentation in court, without interrupting the recording process.

Wavestore diagnostic software can instantly notify users of system malfunctions, camera failures, camera tampering, or network issues. This can be on-screen via the Wavestore client software, or by email or TCP/IP message. Wavestore also provides a secure remote system monitoring service whereby such issues can be remotely addressed by our support team.

Wavestore enables you to control your security system efficiently and confidently, providing fast response to real time and past events.

Cutting Edge Innovation

At Wavestore we are committed to constant innovation and product development, with the ability to evolve quickly and efficiently from development, through test and approval, to product release. Designed, developed and manufactured in the UK, Wavestore has an excellent reputation for creating powerful, flexible, highly scalable solutions designed to meet the demands of continuous security surveillance.

We carefully select our hardware partners to preserve the exceptional standards of our products. We evaluate and test the quality and performance of all components to fulfill our exacting system requirements and deliver low maintenance systems.

At Wavestore we carefully listen to our customers' requirements, analyse their specific applications, and work together to develop solutions achieving the best performance for their security needs. As we develop, test and manufacture all our products, we are able to offer excellent technical support and ensure a high standard of customer service.

In today's fast pace environment, Wavestore flexibility is the answer to your security needs.

Quality Certifications

Wavestore is proud to be a Principle member of the BSIA (British Security Industry Association) as well as a section member of its Export Council.

Wavestore applies a quality management system based on ISO 9001:2008 standards. This certification confirms that Wavestore consistently satisfies customers' expectations in terms of high quality and best service. Wavestore is also RoHS and WEEE compliant. We select high efficiency and low power components, delivering a green solution with extra power savings whilst achieving high performance recording.

Whether your requirement is driven by the need to maintain high quality security standards or by environmental commitment or other legislation, Wavestore provides you with a compliant solution.

Wavestore Commitment

At Wavestore, we encourage and value customer feedback that enables us to further improve our service and ensure that our product development is aligned to the user experience. We aim to meet your needs and maximise the effectiveness of our solutions to provide a reliable security strategy, tailored to your specific requirements. Wavestore organises customer training and certification programmes to enable customers and partners to fully exploit their Wavestore systems.

You can rely on Wavestore to understand and respond to your evolving needs.

Wavestore solutions have been implemented in many applications around the world, for applications including councils, cities, homeland security, police, hospitals, banks, casinos, transport, ports, airports, rail, retail, industrial, corporate and schools.

Wavestore customers acknowledge the design for its ease of use with important features such as the ability to quickly and easily locate, select and copy specific video clips, while recording never stops.

At Wavestore, we strive to exceed your expectations.

Wavestore Mission

Wavestore is much more than a powerful video recording and video management system; it enables you to fulfil the requirements of diverse security and surveillance solutions through the integration with its technology partners' products.

Whether your application requires a security capability to effectively maintain public spaces, manage commercial assets, monitor transportation systems or support homeland security activities, Wavestore has compelling integrated solutions to meet your objectives.

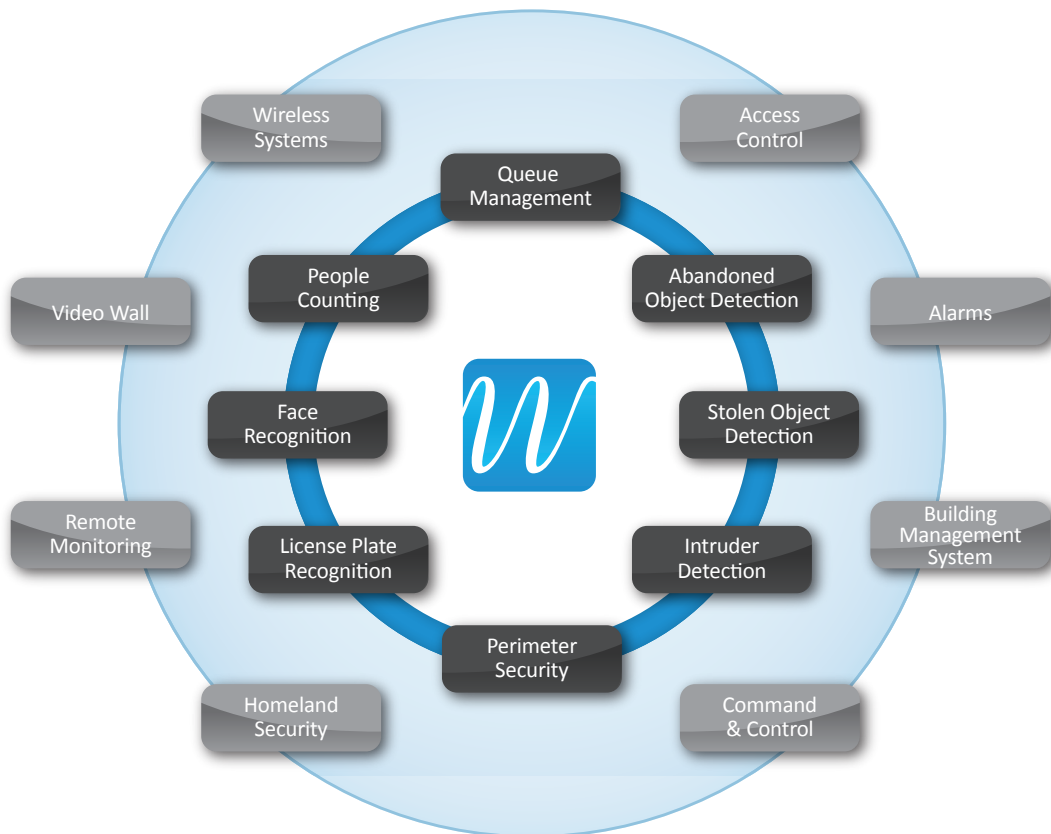

Wavestore is committed to supporting its agents and partners around the world and provides a range of services to ensure that throughout all stages of interaction, from initial enquiry to system maintenance, the relevant knowledge is made available.

Wavestore Training Courses

Wavestore provides a comprehensive training programme for security personnel, distributors, installers, OEMs and systems integrators which can either be delivered in the Wavestore training centre, at the customer site, or for our international partners, delivered over the internet.

Each training course is tailored to provide the knowledge to allow the end users to respond to events confidently and promptly, the distributors to raise their sales, the installers to exploit our technology and the OEMs and systems integrators to create custom solutions to fulfil unique commercial and technical challenges.

Contact us to book your free Wavestore training: you will certainly gain more competencies.
